Recommended Chapters

1 Introduction

The introduction provides background information on the research topic, outlines the research problem or question, and explains the significance of the study.

2 Theoretical Foundation

The theory should encompass individual aspects of the subject area, and thus the topic of the article, and be analyzed for its substantive impact. It often includes a review of relevant literature to contextualize the research.

3 Research Method

In the methods section, authors describe the research design, methodology, data collection techniques, and any statistical or analytical tools used. This section should be detailed enough for other researchers to replicate the study.

4 Analysis and Results

The analysis and results section presents the findings of the study, often using tables, figures, and graphs to illustrate data. Authors should avoid interpretation in this section and focus on presenting the raw results.

5 Discussion and Recommendations

In the discussion section, authors interpret the results, relate them to the research question or hypothesis, and discuss their implications. They may also compare their findings to existing literature.

6 Conclusions, Limitations and Further Research

The conclusion summarizes the main findings of the study and their implications. It restates the research question and provides a concise answer based on the results. In addition, an outlook for future research should be given.

Varying Definitions of Online Communication and Their Effects on Relationship Research

Elizabeth L. Angeli

Abstract This paper explores four published articles that report on results from research conducted on online (Internet) and offline (non-Internet) relationships and their relationship to computer-mediated communication (CMC). The articles, however, vary in their definitions and uses of CMC. Butler and Kraut (2002) suggest that face-to-face (FtF) interactions are more effective than CMC, defined and used as “email,” in creating feelings of closeness or intimacy. Other articles define CMC differently and, therefore, offer different results. This paper examines Cummings, Butler, and Kraut’s (2002) research in relation to three other research articles to suggest that all forms of CMC should be studied in order to fully understand how CMC influences online and offline relationships.
